

Attach and carry and attach and pull multi purpose handle

Abstract

This invention provides a flexible and diverse manner in which to attach a light weight, portable, rugged handle to a variety of items that have uncomfortable handles, and tend to be heavy and or bulky, or are otherwise difficult to carry. Examples include but are not limited to: paint cans, gallons of milk and or water. This invention also can attach to items that are big and or bulky and are otherwise difficult to carry and don't have traditional handles. An example is a standard five gallon water bottle. In addition, this invention can attach to items with a diameter of 2" and less and grip and pull them. Examples include pulling garden hoses, pulling garden stakes out of the ground, and other similar acts.
